Recommended system requirements

- Windows XP, 2000 or 2003 server
- 1 GHz processor
- 256 MB RAM
- 30 MB free space on your hard drive
- CD-ROM drive
- Internet connection (any broadband: cable, DSL etc.)
- Public Service Telephone Network (PSTN)

What is **skype** ?

Skype™ is a program that makes it possible to call for free over the Internet.

After you and your friends or family have installed the program, you can simply make a call by selecting a name in the program. The other party's line will 'ring' and as soon as they answer, you can talk – often with better quality than standard telephony.

Free Internet calls worldwide

NEW!
2-in-1
Internet and
ordinary telephone
in one

The world's first cordless 2-in-1 Internet telephone

- for maximum freedom and minimum telephone bills!

The new Cordless DUALphone is the first cordless Internet telephone on the market, using Skype™. It has been developed with you in mind and uses the latest technology, making it easy to install and cheap to use.

The Cordless DUALphone is a cordless telephone that can be connected to a normal telephone socket and a USB port on a PC. The display shows whether your friends who also use Skype™, are online. If they are, you simply have to press the appropriate green button and talk to them for free – no matter where they are in the world.

If their PC is switched off, or you want to call someone who doesn't use Skype™, you simply press the other green button and call via the standard telephone connection.

3 cordless handsets

Up to 3 extra handsets can be connected to each base station.

Free calls

to other Internet Skype™ users anywhere in the world and cheaper calls to all others, via SkypeOut.

- From Skype™ to Skype™, calls are free.
- From SkypeOut to standard telephones, international, mobile and long distance calls can be made at low rates.
- Normal telephony which costs the same as you already pay to your existing operator.

2-in-1-telephone

With the Cordless DUALphone you get both an Internet and normal telephone in one and the same product, which means you get an extra hands-free telephone line at home. You can dial and receive normal telephone calls or calls over the Internet. And naturally, there are no more sockets and wires to worry about.

Cordless freedom

There's no need to sit in front of your PC anymore to make free calls over the Internet. With the Cordless DUALphone you can roam within a radius of up to 300 metres from the base station. This means, for example, that you can be in the garden, or at a neighbour's house and still receive calls.

Connect and call

Simply connect the Cordless DUALphone to the USB port on your PC and then install the software. The telephone is then ready to make and receive calls via Skype™/SkypeOut or the normal analogue line.
